

Class 2 Summer Term Maths

Week 8

More Fabulous Fractions!

<u>Year 2</u>	<u>Year 3</u>
<p>This week, I would like you to consolidate all your fractions knowledge and skills by doing 2 things:</p> <ol style="list-style-type: none">1. Work your way through the year 2 fractions booklet – you don't have to do it all at once, a page or two each day will be fine.2. Have a go at the fraction word problems challenge cards. If you finish those quickly, you could make some fraction challenges of your own.	<ol style="list-style-type: none">1. Look at the fractions wall. You will see that one whole (the strip at the top) is the same as 2 halves, three thirds, four quarters and so on. You will see that two quarters is the same as one half. We call these equivalent fractions. It means they are the same as each other. How many equivalent fractions can you find by using the fractions wall. Write a list of as many as you can find – there are lots and lots! Use the equals sign to record them, e.g. $\frac{1}{2} = \frac{2}{4}$.2. Now, look and see which fractions are bigger or smaller than others. For example, is $\frac{1}{5}$ bigger or smaller than $\frac{1}{4}$? Which is bigger $\frac{2}{5}$ or $\frac{3}{4}$? Write a second list using the more than and less than symbols to compare different fractions, e.g. $\frac{1}{4} < \frac{1}{2}$ or $\frac{2}{5} > \frac{1}{10}$3. Do the Fractions and ordering activity sheets, there are 4 altogether, do as many as you can but not all at once! (Unless you want to!)4. Have a go at the fractions word problems sheet. It might help to do some drawings to help solve some of these if you are a visual learner.
